-------------------------	---

Game Overview:

Brainrot Mutation Lab is a game that adopts brainrots as valuable creatures that could fuse with other brainrots. The main feature is the fusion brainrots of with other brainrots.

Genre:

- Collection Game
- Idle
- Fusion
- Trading

Target audience:

10+ y/o

Core Gameplay Loop:

Vision Statement:

We want players to feel a lighthearted, satisfying idle collection game where players build a bizarre laboratory filled with original brainrot creatures. Through collecting, fusing, and expanding their lab, players experience a constant sense of progression while optional active events and fair progression systems keep gameplay great without relying on manipulative mechanics.

Core Gameplay:

Movement:

- Walking
- Sprinting

Passive:

- Earning Rot Points with brainrot units

Objectives:

- Buy Brainrot Units
- Fuse Brainrot
- Get Glitch fragments

Controls:

Action	Key
Walk	WASD
Jump	Space
Sprint	Shift
Inventory	Tab
Interact	E

Gameplay Systems:

Inventory:

- Slots
- Bestiary
- Stacking

Currency:

- Rot Points
- Glitch Shards
- Rewards

Mechanics

- Brainrot Units
- Fusion

World Design:

World Overview:

The world design should support the gameplay rather than distract from it. Each player has their own research facility studying and creating brainrot creatures, it should be expandable.

Main Hub

The main hub acts as the central area where players spawn and access the major game features.

Features:

- Laboratory entrances
- Unit Shop
- Fusion Chamber
- Quest Board
- Daily Rewards
- Leaderboards

- Cosmetic Shop
- Rebirth Portal
- Event Area

The hub is designed to be easy to navigate, allowing players to quickly reach important locations.

Personal Laboratory

Each player has their own personal laboratory

Features:

- Brainrot Unit placement area
 - Expansion slots
 - Decorative customization
 - Glitch Event spawning (A jar that fills up as time passes and can be activated to make glitches happen more often)
 - Laboratory upgrades
-

Fusion Chamber

A dedicated station where players combine three duplicate Brainrot Units into one higher-rarity mutation.

Features:

- Fusion animation
 - Rarity preview
 - Success confirmation
 - Collection updates
-

Event Zone

A shared area used for limited-time events and seasonal activities.

Examples:

- Holiday events
 - Community challenges
 - Limited-time Brainrot releases
 - Special cosmetic rewards
-

Visual Theme

The world uses a bright, vibrant science-fiction style.

Design elements include:

- Neon lighting
- Glass containment tubes
- Robotic machinery
- Conveyor belts
- Computer terminals
- Floating holographic displays
- Strange glowing mutation tanks
- Animated laboratory equipment

The environment should feel playful rather than realistic, making the game more comedic.

Characters:

NPCs that help with progression, with expansion of the lab, and travelling like in skyblock.

Progression :

(to be decided in a meeting)

Items :

(to be decided in a meeting)

Monetization :

(to be decided in a meeting)

Task Board :

(Which ai does what) (to be decided in a meeting)

Miscellaneous:

(I asked ai and it said this)

If you're using AI, add these extra sections

These make it much easier for different AI assistants (or teammates) to collaborate without conflicting.

Coding Standards

- Naming conventions
- Folder structure
- Module responsibilities
- Commenting style

Asset Library

- Models

- Textures
- Sounds
- Fonts
- Icons
- Source links

Feature Specifications

Create a detailed page for each feature (e.g., Inventory, Combat, Matchmaking, Shop) with:

- Purpose
- User flow
- UI behavior
- Edge cases
- Technical requirements
- Acceptance criteria

AI Context

Summarize:

- The game's vision
- Design rules
- Coding conventions
- Current progress
- Known issues
- Pending decisions

This section gives any AI assistant enough context to generate code or design work that fits the project without needing to relearn everything each time.
